

# [DOC] Interoperability (data & algorithms) documentation

Welcome to the data/algorithms documentation space!

This is the home page for the documentation of data/algorithms for computer/data scientists. You will find here information about data model, web services to import/export data, algorithm execution, and possible extensions.

This section describes:

- [Data access](#): How to import/export data
- [Available algorithms for image retrieval, segmentation, classification, ...](#)
- [Extension: how to add new data/image analysis modules including description of the concepts of software and job templates, Grails plugins, ...](#)
- Ideas of how you can contribute: develop client for other languages (Matlab, C++,...); plug your own algorithms (deep learning,...); ...
