

Package Version

Package summary

The Config class make it easier the platform updating.

Package main classes

Domain

Domain	Description	Main properties
Version	A new Cytomine version	Long number Date deployed

Package description

After each bootstrap execution, we check if the current Cytomine version has already been executed on this database.
If it is not the case, we add the new version on the database.

During the bootstrap, the method Boolean Version.isOlderVersion(Long) provides a way to run code only if the database was in an old version.

```
if(Version.isOlderVersion(20140715)) {  
    //do some work  
}
```

If Cytomine was in version 20140701 and if we want deploy the new version (e.g. 20140801), the code inside de if will be executed.
